Our 17 year history assures best practice in privacy, security and the ethical use of data

We all have a responsibility to use data for good

Privacy

- We have built our business based on privacy by design principles for the past 17 years
- Quantum has strict protocols around the receipt and storage of personal information
- All information is de-identified using an irreversible tokenisation process with no ability to re-identify individuals.

Security

- We are ISO27001 certified - internationally recognised for our ability to uphold best practice standards across information security
- We use 'bank grade' security to store and process our data
- Comply with 200+ security requirements from NAB, Woolworths and other data partners
- All partner data is held in separate restricted environments
- All access to partner data is limited to essential staff only
- Security environment and processes regularly audited by our data partners.

Ethical use of data

Applies to all facets of our work, from the initiatives we take on, the information we use and how our solutions impact individuals, organisations and society.

Quantum believes in using data for progress, with great care and responsibility. As such please respect the commercial in confidence nature of this document.

Executive summary

01

Customer Analysis

- Top contributing segments: **Budget Older Families, Mainstream Young Singles/Couples, Mainstream Retirees.**
- Sales drivers: Older Families buy **more packets per customer**, while Young Singles/Couples have a **larger population base**.
- Targeting insight: Mainstream Young Singles/Couples are **more likely to purchase premium brands** like Tyrrells, Kettle, and Doritos.

02

Trial Store Analysis

- A store layout trial was implemented in **three trial stores**, each matched with a statistically similar control store.
- **Stores 77 and 86** showed significant uplift — Store 77 in both **sales and customer numbers**, Store 86 mainly in **customer traffic**.
- **Store 88** showed **no significant uplift**, indicating limited or no impact from the trial intervention.

01

Customer Analysis

Older families and retirees contribute the highest chip sales overall, with Budget and Mainstream shoppers driving most of the volume, while affluence has minimal impact on the total quantity of chips purchased.

Across all lifestages, average unit prices remain similar, with only slight variation—indicating that customer affluence or segment type has minimal impact on the price paid per pack.

Deep dive in the mainstream Young Singles/Couples segment

- **Strong brand affinity for premium and bold-flavoured chips** — they are **20–28% more likely** to purchase Tyrrells, Kettle, Doritos, and Twisties than the rest of the customer base, indicating a clear preference for well-marketed, higher-quality brands.
- **Higher willingness to pay** — this segment pays a **statistically higher average unit price** than other young or midage singles/couples, showing lower price sensitivity and stronger brand-driven purchasing.
- **Preference for larger pack sizes** — they lean toward **270g, 330g, and 380g** packs and have a slightly higher average pack size (178g vs. 175g), suggesting chips are an *occasional but larger-portion* purchase for this group.

02

Trial Store Analysis

The control store is selected based on how closely its pre-trial sales and customer trends match the trial store, rather than the average performance of all other stores (e.g., Store 77 vs 233)

Trial store 77 demonstrated a strong and statistically significant uplift in both sales and customer numbers across multiple trial months.

Trial store 86 recorded a meaningful uplift in customer numbers and a significant sales increase in March 2019, but results were less consistent across the trial.

Trial store 88 showed no significant uplift, with its sales and customer metrics remaining within the control store's expected range throughout the trial.
